BATTLE OF THE SCOPES

Friday November 13th

9am to 3pm

Bring your scope with you, if you have one

Cost: Free

Space is limited

Just call or [email](#) to reserve your seat

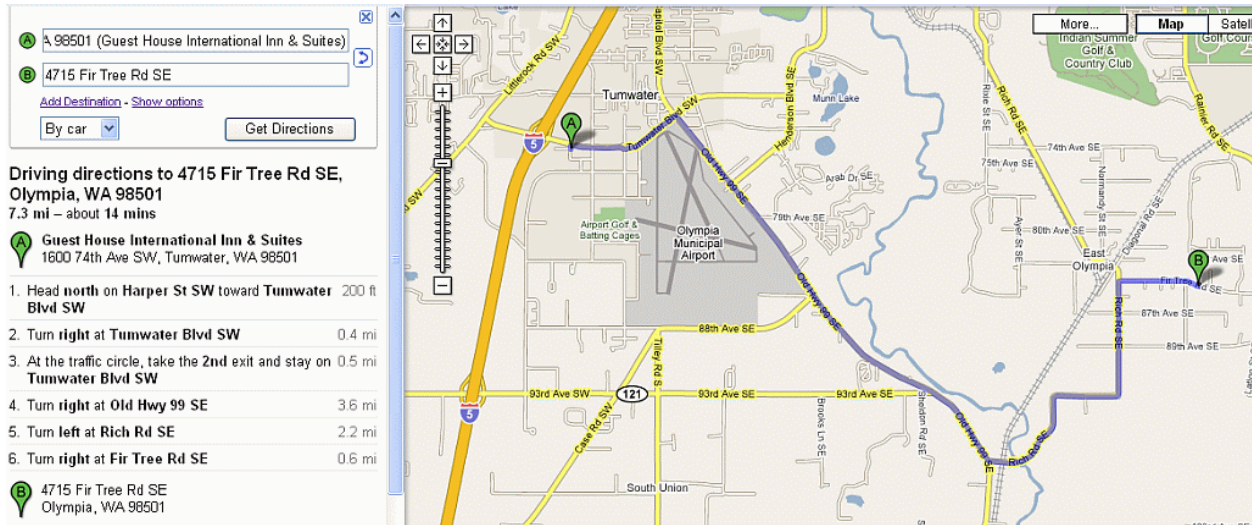

This class is about analyzing your scope, or any scope you may be considering adding to your diagnostic arsenal. This class is recommended for the beginning scope user, or seasoned scope jockey. Understanding your scope is an essential part of using it for diagnostics. To be able to trust what your scope is showing you, you must become familiar with the capabilities and limitations of your chosen instrument. You must learn where the boundaries are because, when you push your scope beyond those boundaries, the results are unreliable.

We will explore some common scope limitations and ways to discover your scope's limits. You will be taken deeper into scope operation principles than you are accustomed to, increasing your understanding and effectiveness. There is a lot of hype and disinformation out there today regarding scopes and their capabilities. This class will help you sort and filter the available information so you will be enabled to objectively analyze any scope's performance and make an informed choice. You will be inoculated against sales pitch doublespeak and empowered to analyze a scope based on basic math and objective criteria. This class will better equip you to choose a new instrument or make more effective use of what you have.

Bring your favorite scope with you and explore it with us.

This is a free class open to anyone.

A \$20 donation toward food and refreshments would be appreciated.

Why is this class free? Don't worry, this is not a sales meeting. We want you to know we are here and introduce you to what we do. Autonerdz is a global LSD cult (Lab Scope Diagnostics 😊) We support customers on six continents. We would like more techs in our own backyard to have the opportunity to benefit from our presence.

We have had many come from great distances overseas to attend events here. Come find out what automotive diagnostic technicians world wide know about a great resource in your own neighborhood that you don't. 😊
